## Extract of auxinic algae

Marked enlargement of the root system and consequent better nutritional efficiency

KLP

Phyostimulates growth and facilitates reproduction

KLP

Micronutrient and balancing action of the vegetative-reproductive state

KLP

Improve resistance to low temperatures and other stress factors

KLP

Promotes calcium assimilation

KLP

Products available in:

1 kg bottle

5 kg tank

20 kg tank

Extracts of seaweed *Ecklonia Maxima*

*Ecklonia Maxima* is the typical South Atlantic algae. Its extract is particularly rich in natural plant growth regulators [Auxine: Citochinine = 150: 1]. Its effects are all those attributable to auxinic activity: rooting, fruit setting, fruit size. It also has repellent action against insects and cryptogams.

*Ecklonia Maxima* extract derives from a mechanical process that, in just 8 hours from harvesting, gives rise to the finished product, in this way all the natural plant growth regulators do not suffer the slightest alteration.
