

# Vegetal B60

## Anti-stress for foliar applications

Reduction of thermal, water and salt stress sensitivity

BT

Increased photosynthetic activity (biostimulating effect) and nitrogen fixation

BT

Organic nitrogen of plant origin

AA

BT

More coloring of the fruits

AA

BT

Regulates and balances plant growth (roots, shoots, fruits)

AA

Intensifies photosynthetic activity and increases productions

AA

Products available in:

6 kg tank

20 kg tank

BT

Glycine Betaine belongs to the family of osmoregulating substances, produced by plants in situations of thermal, water and salt stress. This peculiarity makes Glycine Betaine essential in the critical phases of crop development: Germination, Fruit Setting, Enlarged Fruits and Maturation.

The Glycine Betaine contained in the ED & F Man products is extracted exclusively from sugar beet without any added chemical additives.

AA

The amino acid complex particularly rich in Glutamic Acid, in addition to being a precursor for the synthesis of all the other essential amino acids, increases the synthesis of chlorophyll, regulates the stomatal opening and increases the fertility of the pollen.

The totally vegetal origin of the Amino Acidi contained in the ED & F Man products allows its application without any restriction on all edible parts of the crops.
